

COVID-19 Discontinuation of Adult Inpatient Special Precautions Isolation

- For persons previously diagnosed with COVID-19 who remain asymptomatic after recovery, retesting is not recommended within 3 months after the date of the initial COVID-19 infection.
- **** For severely immunocompromised patients, consult Infectious Disease or Infection Prevention & Control prior to discontinuing isolation precautions.**
- Consult Infection Prevention & Control prior to discontinuing isolation when the patient is receiving ECMO.
- Discontinuation of isolation precautions should occur with physician collaboration.
- Contact Infection Prevention & Control with any questions.
